1. Context & concept

AI acceleration, GPU shortages, semiconductor geopolitics and hyperscaler concentration make **compute sovereignty** a strategic priority for governments, institutions and major industries.

Compute sovereignty refers to:

The ability of a State, regional bloc, institution or enterprise to secure and control its critical compute resources — sovereign clouds, data centers, accelerators, semiconductor supply chains, availability and costs — ensuring autonomy, resilience and continuity.

The expression appears increasingly in:

- sovereign AI discussions,
- tech-policy papers,
- strategy documents on cloud concentration,
- analyses of geopolitical compute dependencies.

ComputeSovereignty.com provides the **exact-match .com** banner for this emerging concept.

2. Why this domain name is strategic

✓ Recognition in global debates

The term is already referenced in AI governance, cloud policy and geopolitical analyses.

✓ C-suite and board-level readability

“Compute Sovereignty” speaks instantly to CIO/CTO/CISO/CRO, regulators and ministries.

✓ Exact-match .com — premium semantic asset

As seen with ModelSovereignty.com and ComputeSolvency.com, owning the exact-match .com is a strategic advantage if the concept becomes mainstream.

✓ Natural fit within the “Sovereign AI Stack”

Compute ↔ Model ↔ Automation sovereignty form a coherent framework for 2030 AI governance.

✓ Complement to ComputeSolvency.com

- Compute Sovereignty = governance & autonomy
- Compute Solvency = resilience, risk, cost, dependency

Two complementary pillars frequently addressed at board level.

3. Potential use cases

A. Global Compute Sovereignty Observatory

A neutral hub mapping:

- compute availability by region,
- GPU supply & dependencies,
- cloud concentration risks,
- semiconductor exposure,
- sovereign-AI readiness.

B. Compute Sovereignty Index

A reference index for:

- development banks,
- regulators,
- rating/research institutions,
- sovereign funds,
- ministries and agencies.

C. Public–private alliance platform

Suitable as a neutral banner for alliances including:

- sovereign clouds,
- semiconductor suppliers,
- AI labs,
- national authorities.

D. Umbrella brand for governance programmes

ComputeSovereignty.com can host:

- white papers,
 - frameworks,
 - consultations,
 - annual reports on compute autonomy.
-

4. Natural candidates for use

- EU institutions, digital agencies.
 - Sovereign clouds, hyperscalers, data-center operators.
 - Semiconductor supply-chain actors.
 - AI governance institutes, policy think tanks.
 - Financial institutions evaluating cloud concentration.
 - Alliances and consortiums.
-

5. Editorial positioning

Neutral, institutional and governance-oriented.

Suitable for high-level analysis, multi-stakeholder work and public-private programmes.

6. Notice — domain status

ComputeSovereignty.com is an **independent, descriptive .com domain name**.

It is **not** a regulator, public authority, official standard, or institutional position.

Any use requires independent governance and compliance with applicable regulations.

No guarantee of adoption, performance or valuation is provided.
